```
In [1]: v1 = "first string"
```

```
In [2]: v2 = "second string"
```

```
In [3]: print(v1)
        print(v2)
```

```
        first string
        second string
```

If i want to swap the variables I just created. There are many ways. Some ways are longer version like:

- Create two temp(temporary) variables
    - temp1 and temp 2 So, temp1 = v1 temp2 = v2 now, v1 = v2 v2 = temp 1 But we can shorten it by creating just one variable like:
- Create just one temp(temporary variable)
    - temp So, temp = v1 now, v1 = v2 v2 = temp

```
In [4]: temp = v1
```

```
In [5]: v1 = v2
```

```
In [6]: v2 = temp
```

```
In [7]: print(v1)
        print(v2)
```

```
        second string
        first string
```
